(September 1986 data)

Job Accommodation Network Debuts

The Job Accommodation Network (JAN) is a national information network and consulting service established by the President's Committee on Employment of the Handicapped (PCEH) for employers who wish to hire or retain otherwise qualified workers who have some sort of physical limitation. JAN's primary objective is to enable employers to learn what others have done to accommodate functional limitations. To achieve this, they gathered information from many sources. Gathering the information is valueless, however, unless it can be shared with others. The network has therefore been established to help employers share their experiences and resolve problems in a manner beneficial to both employer and employee.

One of the first things the committee has done is to define disabilities in terms of functional limitations rather than by naming the disease or condition affecting the person. For example, a person may have cerebral palsy, but her job-related limitation may be the inability to grasp objects. A man may have a heart condition, but it may affect his job performance only to the extent that he has decreased stamina. Another may have arthritis and, thus, be unable to squat or bend. By focusing on the problem in terms of the specific function a person is unable to perform rather than on the total condition which may have little to do with his ability and readiness to work, employers can then seek solutions to the specific problem.

Despite antidiscrimination laws, employers are often reluctant to hire people with disabilities for a variety of reasons. Usually, they do not realize that the disabled can often perform the job as well as their able-bodied counterparts; they just can't function in the same way. Some modification to the workplace may be needed.

From the employer's perspective, there are a number of incentives for trying to accommodate the employee or applicant with a physical limitation. Foremost among these is that the handicapped person may be a competent, dependable, and productive employee. Workers' compensation and other insurance costs may be reduced by making modifications to the workplace that make it safer for all employees.

The perception may exist among some employers that job accommodation is an expensive undertaking, so much so that they are discouraged from implementing such changes. Cost is not, however, the major factor in most such decisions, according to a study conducted by the U.S. Department of Labor. Rather it is lack of awareness about job accommodation that hampers most disabled people who are trying to enter or progress in the job market. Few employers have adequate information about both disabled individuals and job accommodation techniques. Until recently, there was no central place to which an employer could turn for information and assistance in finding viable options on changing work environments.

In most instances, handicapped people need only minor changes. According to a *Wall Street Journal* report, almost a third of the special devices purchased to help the disabled function on the job cost between $1 and $500; only 19% cost more than $2000. For example, a major insurance company accommodated a wheelchair-bound employee who has difficulty going through doors by installing a buzzer to alert building guards to the

(Continued on the following page)

employee's presence and need for assistance. This solution proved satisfactory and much cheaper than the automatic doors originally considered. Even allowing for a flexible work schedule might enable a person who cannot drive to arrange for transportation. Or the solution may be as simple as rearranging the furniture to accommodate a wheelchair.

The clearinghouse, which has been in existence for about two years, maintains a computer file with several thousand ideas for dealing with specific disabilities. Among the suggestions are placing a desk on cinder blocks so that a wheelchair can fit under it, providing telephone amplifiers for hearing-impaired persons, and voice synthesizers to play back what a blind person types. One major company installed a full-speech computer for a blind programmer. Another had an orthopedic appliance manufacturer design and make a device that would enable an amputee to return to his old job which required the use of both hands. The device, which cost $1800, enabled the employer to take advantage of the experience of a proven employee and enabled the employee to return to full productivity.

The clearinghouse's files are not filled with untried theoretical solutions. Information, such as the above, is collected from employers who have successfully accommodated some functional limitation. They are asked to provide specific information about the nature of the accommodation and its cost to the company.

The Job Accommodation Network operates a toll-free number that the employer can call for suggestions about ways to enable handicapped persons to function in the workplace. The number is 1-800-526-7434.

Notice to our Readers

The U.S. Department of Labor has announced that the release of the annual listing of labor surplus areas will be delayed while the department implements the provisions of Public Law 99-272, which changes some of the criteria for defining labor surplus areas. The list currently in effect has been extended until further notice.

NOTE: These preliminary estimates were prepared in cooperation with the U.S. Department of Labor, Bureau of Labor Statistics, based upon monthly reports submitted by selected employers throughout Georgia. The estimates include all full- and part-time wage and salary workers who were employed during or received pay for any part of the pay period that includes the twelfth of the month. Proprietors, domestic servants, self-employed persons, unpaid family workers, and personnel of the armed forces are excluded. Estimates based on 1985 benchmark.

NOTE: Totals may not add because of rounding.

Georgia TRENDS

Georgia Department of Labor Labor Information Systems **Joe D. Tanner, Commissioner**
In Cooperation with the U.S. Department of Labor's Bureau of Labor Statistics and Employment and Training Administration

VOLUME XII, NUMBER 10
(October 1986 data)

School Opening Increases Employment

Georgia's nonagricultural wage and salary employment rose almost 11,000 from September, more than half of it in the state education sector. This latter reflected the normal fall increases in enrollment at state colleges. Wholesale and retail trade increased 3,200 with most of the gain occurring in wholesale trade establishments as they prepared to supply retailers for the Christmas shopping season. The other large gainer was construction; almost all of the increment occurred in the Atlanta area, reflecting the building boom in the state's largest metropolitan area. Manufacturing continued to decline, as most industries posted small losses.

More than half of the October increase in jobs in the state occurred in the Atlanta area. Although following the state's pattern in part, there were a few interesting differences. For example, although the largest gain in any division occurred in trade, most of it was in the retail sector, reflecting the opening of a number of new stores. A major discount outlet mall, Southlake Festival, opened in Clayton County. Manufacturing, which comprises much less of Atlanta's economic base than of Georgia's, dropped only 200 jobs.

Of the six remaining Metropolitan Statistical Areas (MSA's), only Athens recorded an employment gain of any significance. This seasonal increase was brought about by the beginning of the fall quarter at the University of Georgia. Savannah and Macon posted gains of 400 and 300, respectively, while Augusta, Columbus, and Albany had employment levels unchanged from September.

A comparison with October of last year yields a somewhat different picture, and one that is more meaningful if expressed in percentages rather than absolute numbers. The number of nonagricultural wage and salary jobs rose by 77,700, or 3 percent in the state. Among the MSA's, Atlanta recorded the largest percentage increase (4.8), followed by Savannah's 3.1 percent. Athens was a distant third with 1.2 percent, and Macon gained 0.6 percent. Columbus's level was unchanged, while Augusta and Albany lost jobs. Augusta's decline was negligible (100 jobs, or 0.1 percent), but Albany lost 4.2 percent of its nonagricultural wage and salary employment, almost entirely the result of the closing of the Firestone plant.

The largest number of new jobs in the state occurred in the trade division, followed closely by the services sector. From a percentage standpoint, however, construction more than doubled the gain of the trade industries. Savannah led the way with a tremendous 43.4 percent increase in its construction force, followed by Atlanta with a 17.6 percent increase. Savannah's construction boom was caused by the activity surrounding the building of the new Fort Howard Paper Company facility.

Statewide, manufacturing was the only industry division to decline. The sector lost 2,600 jobs, or 0.5 percent, over the year. The decrease was concentrated in the state's urban areas. Albany suffered the greatest loss because of the already-mentioned closing of the Firestone

(Continued on the following page)

plant, and Augusta and Columbus lost 900 jobs each, largely because of declines in their textile industries.

Of the annual gain in jobs in the state, 81 percent of the 77,700 were in the Atlanta MSA. Savannah gained 6 percent of the total, and Athens and Macon 1 percent each. Columbus was unchanged, and both Augusta and Albany declined, the latter by a substantial number. The nonmetropolitan area of the state gained 13 percent of the jobs.

Georgia TRENDS

Georgia Department of Labor Labor Information Systems **Joe D. Tanner, Commissioner**
In Cooperation with the U.S. Department of Labor's Bureau of Labor Statistics and Employment and Training Administration

VOLUME XII, NUMBER 11
(November 1986 data)

NOVEMBER EMPLOYMENT RISES

Georgia's nonagricultural employment rose 6,900 in November, a 2.6 percent increase from the previous month. By far the largest increase (7,000) occurred in wholesale and retail trade, with 86 percent being in the retail sector as store management prepared for the onset of the Christmas shopping season. The government sector gained 1,200 employees, largely because of increased employment in the Savannah, Clayton County, and Cobb County schools. Services rose a modest 800; the largest increment was in business services. Manufacturing continued to decline, dropping 1,000 from October, most of it in the apparel industry. A Troup County apparel manufacturer closed permanently, idling almost 300 workers, while layoffs in other facilities throughout the state left several hundred more workers temporarily jobless. Contract construction lost 700 workers, the beginning of normal seasonal cutbacks. The loss of 600 in transportation, communication, electric, gas, and sanitary services occurred because of the downward trend in motor freight transportation and warehousing; transportation services; and commercial air transportation.

From a year ago, the state's employment grew by 79,700 jobs, all of them in the nonmanufacturing sector. Every division in that group shared in the growth, but wholesale and retail trade recorded the greatest increase of 33,100, or 42 percent of the total. Services gained 24,900, almost a third of the jobs. Growth in the trade industries was relatively proportionate, but the increase in the service industries was greatest in business and health services. The number of construction jobs in the state also grew substantially. The beleaguered manufacturing division lost 3,500 from November of 1985. The largest loss was in apparel; the decrement was scattered throughout the industry and represents a general downward trend. The second largest decline occurred in "other nondurable goods", mostly because of the closing of the Firestone plant in Albany. A bright note was the increase of 1,700 in textiles. Despite small declines in broadwoven fabrics, gains in other sectors of the industry more than offset them. Floor covering mills and yarn and thread mills were in the forefront of the growth.

Almost all of the growth (both monthly and annual) in nonagricultural jobs occurred in the Atlanta Metropolitan Statistical Area. The state's employment increased by 6,900 from October; Atlanta's by 6,700. Georgia recorded 79,700 more jobs over the year; Atlanta, 63,800. Because so much of the increase was in Atlanta, the growth patterns closely paralleled those of the state, although there were some differences. Construction in the Atlanta area grew at a faster rate than construction statewide. Government also increased more in Atlanta, due in part to the concentration of federal government employment in the area. Contrary to the statewide trend, manufacturing increased by 700 over the year, mostly because of the strength of the transportation equipment segment. From October, manufacturing employment declined 200 because of minor fluctuations throughout the division.

Savannah and Macon were the only other Metropolitan Statistical Areas to post gains from both refer-

(Continued on the following page)

ence periods. Savannah was especially strong in the construction industry, reflecting the growth caused by the building of the large Fort Howard project. Macon's modest annual gain was in finance, insurance, and real estate and government. The monthly gain was in trade; finance, insurance, and real estate; and government.

Employment changes in the remaining areas were mixed. Augusta, Columbus , and Albany recorded small monthly gains. Augusta and Albany declined over the year, while Columbus was unchanged at the total level. Declines in Columbus's manufacturing industries were offset, however, by scattered gains among the nonmanufacturing divisions. Employment in the Athens area was unchanged from October, but rose 1,100 from November 1985 because of scattered increases throughout.

The average weekly manufacturing wage in the state rose $2.08 from October. The only significant increase occurred because of more overtime in electric and electronic equipment. Annually, earnings were up $9.04. Only in the primary metals industry were there significant changes in the hourly rate of pay; most of the fluctuations in earnings occurred because of more or less overtime within an industry.
